

RUPESHWAR DURAISAMY

Computer Science & Engineering Student | Aspiring Data/AI Engineer

+91 9551139455 | rupeshwarduraisamy@gmail.com | github.com/RUPESHWAR-21 | Chennai, Tamil Nadu 600048

SUMMARY

Computer Science and Engineering student with hands-on experience building full-stack applications (React, Node.js, Supabase) and a machine learning project (XGBoost) that achieved 90% accuracy on a 50,000-row synthetic dataset for predictive vehicle maintenance. Experienced in automated data pipelines using Python, SQL, and web-scraping tools (Playwright, BeautifulSoup). Seeking an entry-level Data/AI role to apply analytical and full-stack development skills to real-world data problems.

EDUCATION

Sri Sai Ram Institute of Technology, Chennai — B.E. Computer Science and Engineering — 2023 to 2027 — Current CGPA: 7.34/10 (in progress)

Shri Natesan Vidhyasala Matriculation Higher Secondary School, Chennai — 12th (HSC) — 2022 to 2023 — Percentage: 78.17%

Sushil Hari International Residential School (CBSE), Chennai — 10th (SSLC) — 2020 to 2021 — Percentage: 59.80%

INTERNSHIP EXPERIENCE

Autointelli — Software Development Intern — Anna Salai, Chennai, India — December 2025

- Architected a 3-tier e-commerce deal-discovery platform (React, Node.js, Supabase) processing real-time pricing data.
- Built a web-scraping pipeline (Playwright, BeautifulSoup, Telegram API, SQL) that captured pricing data on 150 products per 3-hour scrape cycle.
- Engineered automated expiry-detection and price-validation logic, surfacing only active discounts of 50% or greater.
- Designed an automated setup workflow and category-organized interface to streamline deployment across product categories.

DLK Technologies — Web Development Intern — Vadapalani, Chennai, India — June 2025

- Engineered a responsive, mobile-first blog interface using semantic HTML/CSS, ensuring consistent rendering across screen sizes.
- Built interactive JavaScript UI components to increase visitor engagement beyond the original static layout.
- Debugged cross-browser rendering issues to deliver a stable, production-ready interface.

PROJECT

AI-Driven Predictive Vehicle Maintenance System

- Built an XGBoost machine learning model trained on a 50,000-row synthetic OBD-II dataset, forecasting engine and brake failures with 90% accuracy.
- Designed a React dashboard enabling continuous, real-time observation of vehicle health during operation, translating raw ECU metrics into live health scores and repair-cost estimates.

SKILLS

Languages & Databases: Python, JavaScript, Java, SQL, HTML, CSS

Frameworks & Tools: React, Node.js, Supabase, Playwright, BeautifulSoup, Selenium, XGBoost

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Software Engineering

LEADERSHIP & ACTIVITIES

Vice Secretary — Coordinated large-scale technical symposiums and served as a liaison between students and faculty.
